

# NATURE'S OWN WATER FACTORY

A mountain catchment area (MCA) is an area of land that feeds rainwater to a particular river

DID YOU KNOW?  
About 60 % of the water used by farms, factories and people like you and me living in the Western Cape comes from MCA's?

The main threats to our MCA's are unplanned fires and invasive alien plants which are currently draining a lot of fresh water.

Help CapeNature ...  
Protect your mountains,  
Protect your water!
