

HOW DO WETLANDS PROTECT OUR FUTURE?

World Wetlands Day • 2 February 2025

SUPPORTING BIODIVERSITY

Wetlands provide habitats for a variety of plants, insects, fish and mammals.

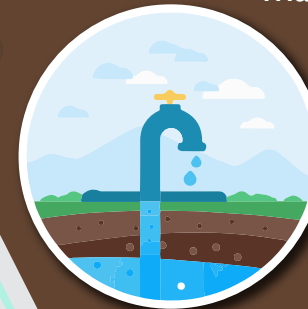

FILTRATION & PURIFICATION

Wetlands are natural filters, filtering out pollutants and excessive nutrients.

CLIMATE ADAPTATION

Wetlands helps with flood control flowing stream and temperature stabilization.

FRESHWATER AVAILABILITY

Most coastal and estuarine wetlands serve as nursery habitat for many fish species.

ECONOMIC STABILITY

Wetlands contribute towards the economy by providing opportunities for recreational and tourist activities.

BE VIGILANT: Report illegal activities threatening wetlands promptly, such as dumping, draining, or unauthorized construction.

National Environmental Crimes Hotline: 0800 205 005 (24 hours) to report incidents and help authorities take necessary actions.
